

Scalar Curvature

Your name

August 28, 2024

1 Introduction

It is known that scalar curvature controls the volume of geodesic ball.

2 Formula

Theorem 1. *The asymptotic expression of volume of geodesic ball is:*

$$\text{Vol}(B_r(p)) = \omega_n r^n \left(1 - \frac{\text{Scal}(p)}{6(n+2)} + O(r^3) \right), (r \rightarrow 0).$$

Proof. See Gallot, et. al., *Riemannian Geometry*.
